

# GitLab Issues Import

Titra requires an API token for GitLab which can be created in the top right user menu and selecting the Preferences entry:

In the User Settings, navigate to Access Tokens and create a new Personal Access Token. Titra requires one of the scopes `read_api` **or** `read_user`. Both will work but obviously offer different degrees of access rights in regards to issue data.

User Settings > Access Tokens

Search page

### Personal Access Tokens

You can generate a personal access token for each application you use that needs access to the GitLab API.

You can also use personal access tokens to authenticate against Git over HTTP. They are the only accepted password when you have Two-Factor Authentication (2FA) enabled.

#### Add a personal access token

Enter the name of your application, and we'll return a unique personal access token.

**Token name**

For example, the application using the token or the purpose of the token. Do not give sensitive information for the name of the token, as it will be visible to all project members.

**Expiration date**

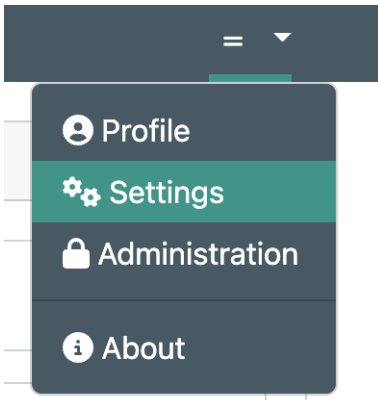

**Select scopes**

Scopes set the permission levels granted to the token. [Learn more.](#)

- api  
Grants complete read/write access to the API, including all groups and projects, the container registry, and the package registry.
- read\_api  
Grants read access to the API, including all groups and projects, the container registry, and the package registry.
- read\_user  
Grants read-only access to the authenticated user's profile through the /user API endpoint, which includes username, public email, and full name. Also grants access to read-only API endpoints under /users.
- read\_repository  
Grants read-only access to repositories on private projects using Git-over-HTTP or the Repository Files API.
- write\_repository  
Grants read-write access to repositories on private projects using Git-over-HTTP (not using the API).
- read\_registry  
Grants read-only access to container registry images on private projects.

« Collapse sidebar

After the API token has been created, it can be added in titra in the Settings menu.

At the bottom, in the "Integrations" section, the GitLab Instance URL (e.g. <https://gitlab.com/>) can be specified along with the GitLab API token created before.

GitLab

GitLab Instance URL  
<https://gitlab.com/>

GitLab API Token

The GitLab interface is working for both self-hosted and SaaS versions of GitLab, for self-hosted instances make sure the CORS headers are set properly to allow API connections from your titra

host.
